# Nonlinear Optics: Phenomena, Materials and Devices

# George Stegeman, Professor Emeritus College of Optics and Photonics University of Central Florida

#### **Table of Contents**

Part A: Second Order Phenomena

| Chapter | 1. IIIIIOU | uction   |
|---------|------------|--|
| 1.1     | Introduc   | tion to Nonlinear Optics                         |
| 1.2     | What is    | Nonlinear Optics?                                |
|         | 1.2.1      | Examples of Nonlinear Optical Phenomena          |
| 1.3     | Classica   | 1 NLO Expansion                                  |
| 1.4     | Simple I   | Model for Susceptibilities: Electron on a Spring |
| Chapter | 2: Second  | Order $(\chi^{(2)})$ Susceptibility              |
| 2.1.    | Derivat    | ion of Second Order Susceptibilities             |
| 2.2     | Properti   | es of $\chi^{(2)}$                               |
| 2.3     | Second     | Harmonic Polarization                            |
| 2.4     | Sum and    | Difference Frequency Generation                  |
| 2.5     | Integral   | Formulation of Susceptibilities                  |
|         | 2.5.1      | Materials with Non-Instantaneous Response        |
|         | 2.5.2      | Field Fourier Components                         |
|         | 2.5.3      | Linear Susceptibility                            |
|         | 2.5.4      | Second Order Susceptibility                      |
|         | 2.5.5      | Sum and Difference Frequency Susceptibilities    |

### Chapter 3: Coupled Wave Equations for Generating New Frequencies

- Slowly Varying Phase and Amplitude Approximation (SVEA)
- $\chi^{(2)}$ : A Weak Perturbation 3.2
- Coupled Mode Equations With Depletion for  $\chi^{(2)}$ 3.3

### Chapter 4: Wavevector (Phase) Matching

- Phase-Matching in Uniaxial Crystals 4.1
  - 4.1.1 Type I Phase-Match
  - 4.1.2 Type II Phase-Match
  - "Critical" Versus "Non-Critical" Phase Match 4.1.3
  - 4.1.4 Temperature Tuning of Phase-Match Condition
- Birefringent Phase-Matching: Biaxial Crystals 4.2
- 4.3 Quasi-Phase-Matching

- Chapter 5: Maximizing  $d_{eff}^{(2)}$ 5.1 Effect of Crystal Symmetry 5.2 Calculation of  $d_{eff}^{(2)}$ 5.3 Specific Examples

## Chapter 6: High SHG Conversion Efficiency and Nonlinear Modes

- 6.1 Type I SHG: Large Conversion Limit
  - 6.1.1 Phase-matched case  $\Delta k=0$
  - 6.1.2 Non-Phase-Matched Case  $\Delta k \neq 0$
  - Nonlinear  $\chi^{(2)}$  Eigenmodes 6.1.3
  - Manley-Rowe Relations (conservation of energy), Type I 6.1.4
- 6.2 Type II SHG: Large Conversion Limit
  - Manley-Rowe Relations, Type II 6.2.1
  - 6.2.2 SHG: Large Conversion Limit Type II
  - 6.2.3 Nonlinear Eigenmodes  $\Delta k=0$

#### Chapter 7: SHG with Finite Beams

- SHG With Gaussian Beams 7.1
  - 7.1.1 "Thin Sample" Limit
  - 7.1.2 Optimum Conversion
  - 7.1.3 Pulsed Fundamental Finite Beam
  - 7.1.4 Fundamental and Harmonic Beam Walk-Off
  - 7.1.5 Examples of Finite Beam SHG

| 7.2                 | QPM SHG Engineering 7.2.1 QPM Bandwidth Engineering 7.2.2 Ultrafast Pulses for SHG 7.2.3 SHG For Pulse Compression 7.2.4 SHG For Spatial Beam Shaping                                      |
|---------------------|--|
| Chapter 8.1 8.2 8.3 | 8: Three Wave Mixing Processes Terminology for Different Processes Manley-Rowe Relations Sum Frequency Generation 8.3.1 Plane waves, low depletion limit 8.3.2 Large Conversion Limit      |
| Chapter 9.1         | 9: Optical Parametric Generators and Oscillators Optical Parametric Amplifier (OPA) 9.1.1. Undepleted Pump Approximation   |
| 9.2                 | <ul> <li>9.1.2 Solutions with Pump Depletion</li> <li>Optical Parametric Oscillators (OPOs)</li> <li>9.2.1 Doubly Resonant Cavity Fields</li> <li>9.2.2 DRO Threshold Condition</li> </ul> |
| 9.3                 | 9.2.3 Doubly Resonant OPO Instabilities Singly Resonant OPO (SRO)  |
|                     |  |
|                     |  |
| 9.4                 | OPO Output   |
| 9.5                 | Frequency Tuning of OPO  |
| 9.6                 | Examples of OPO's  |
| Chanter             | 10 $\chi^{(2)}$ Materials  |
| 10.1                | Survey of Materials  |
| 10.2                | Dielectric Crystals  |
|                     | 10.2.1 BBO   |
|                     | 10.2.2 LBO<br>10.2.3 KTP   |
| 10.3                | Organic Materials  |
|                     | 10.3.1 Charge Transfer Molecules   |
|                     | 10.3.2 Simple quantum mechanical model for calculating molecular $\chi^{(2)}$ , i.e. $N\beta^{(2)}$  |
|                     | 10.3.3 NPP   |
| 10.4                | 10.3.4 DSTMS Techniques For Measuring (2)  |
| 10.4                | Techniques For Measuring $\chi^{(2)}$<br>10.4.1 Kurtz Powder Method  |

10.4.2 Maker Fringe Method

|  | First Order Perturbation Theory   |
|--|---|
|  | 11.1.1 Evolution of Excited State Populations Due to an Interaction   |
|  | 11.1.2 Electric Dipole Interaction  |
|  | 11.1.2.1 First Electric Dipole Interaction with Field   |
|  | 11.1.2.2 Second Dipole Interaction with Field   |
|  | 11.1.2.3 Third Dipole Interaction with Field  |
| 11.2   | Optical Susceptibilities  |
|  | 11.2.1 Linear Susceptibility  |
|  | 11.2.1.1 Local Field Correction   |
|  | 11.2.2 Second Order Susceptibility  |
|  | 11.2.3 Third Order Susceptibility   |
| 11.3   | Two Level Model   |
| 11.5   | 11.3.1 Second Order Nonlinear Interactions  |
|  | 11.3.1 Second Order Nonlinear Interactions 11.3.2 Third Order Nonlinear Interactions  |
|  | 11.3.2.1 Third Harmonic Generation  |
|  |   |
|  | 11.3.2.2 Nonlinear Refraction and Absorption  |
|  | 11.3.3 Effect of Population Changes in Two Level Systems on $\chi^{(3)}$  |
